# DIY RAINWATER CATCHER

## BUILD YOUR OWN MINI WATER BUTT!

It's a simple DIY that helps your garden- and the planet. Tap into the power of rain and give your plants a drink during dry spells, while saving precious water at home. Follow our easy guide and get catching!

### YOU WILL NEED:

**MILK CARTON**

**STRING**

**SCISSORS**

**TAPE OR GLUE**

**DECORATIONS**

## CUT OFF THE BASE

Save a milk carton or other plastic bottle, give it a wash out and remove the label. Carefully cut off the base of the carton - you may need to ask an adult for help!

## ADD STRING & DECORATE

Tie string around your carton to hang it up with, then decorate your carton with whatever you like! We love stickers, paint, and drawings.

## HANG YOUR RAINWATER CATCHER OUTSIDE!

Hang your creation outside (e.g. on a fence). Make sure the cap is on and pointing down, so you can catch rainwater!

ONCE IT'S  
FULL, WATER  
YOUR PLANTS!
